

Stargate

wide-range antennas for a larger detection zone

AM

Stargate comes with all the benefits of an acousto-magnetic (AM) alarm system. Thanks to its wide detection zone, fewer antennas need to be installed. One Stargate antenna can be used to cover the area where two or three other types of antenna are typically required. This is valuable both for shops with limited entrance space and for shops with larger entrances.

Stargate's mono-antenna configuration is also beneficial where there is insufficient space for two antennas to be installed.

This cost-effective alarm system is built to withstand the general buffeting that antennas can take due to the constant stream of customers and is suited for installation in practically any type of store.

about AM technology

In particular, acousto-magnetic (AM) technology is suited to guarding wide aisles and entrances. AM alarm systems can also be mono-configured, which means an entrance or aisle can be protected by a single antenna.

AM antennas work in conjunction with hard tags and very small, discreet adhesive labels, advantageous to outlets selling smaller items. AM labels are quick and easy to deactivate.

Galaxy Midi & Midi Ink

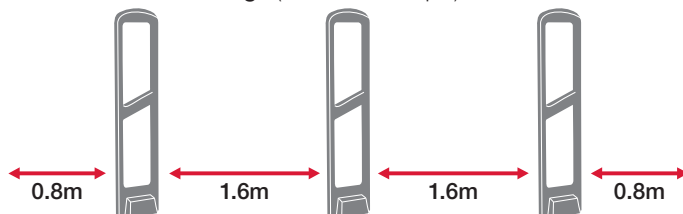

A3

AM Label

3 antennas exit coverage (AM label example)

features

- Can operate as mono-antenna
- Robust and cost-effective
- One control box operates up to three antennas
- Stargate AM systems detect on each side of the antenna

specifications

width	430 mm
height	1576 mm
thickness	32 mm
thickness at base	96 mm
standard colour	silver grey
standard frequency	58 KHz

total exit coverage

Antennas	AM label	A3	Galaxy Midi
1	1.6 m	2 m	2 m
2	3.2 m	4 m	4 m
3	4.8 m	6 m	6 m

AM hard tags are fire-resistant and fitted with super-strong magnets to prevent tampering. All hard tags come with smooth pins that will avoid damage when applied to garments.
