

Stargate Plexi Clear

transparent, wide-range antennas

Stargate Plexi Clear comes with all the advantages of an acousto-magnetic (AM) alarm system. Thanks to its wide detection zone, shops with large entrances benefit as fewer antennas are required to be installed.

One Stargate Plexi Clear antenna can be used to cover the area where two or three other types of antenna are typically required. Therefore this mono-antenna configuration is also beneficial where there is extremely limited shop space, insufficient for two or more antennas.

In addition, the antennas are designed in a clear plexiglass finish to create the sense of a more open space wherever they are installed.

about AM technology

In particular, acousto-magnetic (AM) technology is suited to guarding wide aisles and entrances. AM alarm systems can also be mono-configured, which means an entrance or aisle can be protected by a single antenna.

AM antennas work in conjunction with hard tags and very small, discreet adhesive labels, advantageous to outlets selling smaller items. AM labels are quick and easy to deactivate.

Galaxy Midi & Midi Ink

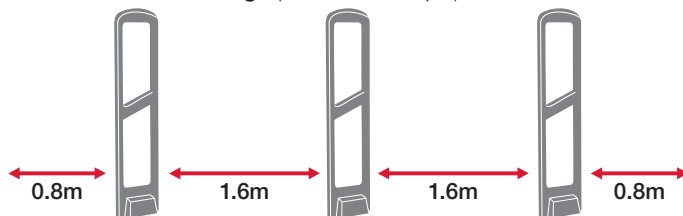

A3

AM Label

3 antennas exit coverage (AM label example)

features

- Suitable for wide aisles
- Can operate as mono-antenna
- One control box operates up to three antennas
- Stargate AM systems detect on each side of the antenna

specifications

width	430 mm
height	1576 mm
thickness	20 mm
standard frequency	58 KHz

total exit coverage

Antennas	AM label	A3	Galaxy Midi
1	1.6 m	2 m	2 m
2	3.2 m	4 m	4 m
3	4.8 m	6 m	6 m

AM hard tags are fire-resistant and fitted with super-strong magnets to prevent tampering. All hard tags come with smooth pins that will avoid damage when applied to garments.
